Travel Tips

Packing and Maneuvering International Airports

Delaware
Department of Education

Packing Tips

#1

Choose the right size luggage

1 checked Bag less than 50 lbs/18 kgs

1 carry on bag

1 personal item (shoulder bag, backpack, laptop bag)

The maximum dimensions for a carry-on bag are 9 inches x 14 inches x 22 inches (22 cm x 35 cm x 56 cm), including handles and wheels.

#2

Roll Your Clothes

Everything is tight. Avoids wrinkles. Easier to pack.

**#3 Leave room
for souvenirs**

**#4 Make a list so
you don't forget
anything**

(See handout)

**#5 Carry on
valuables**

TSA travel tips

<https://youtu.be/hSOgsgLcXzs?si=Sah9zxVcnR0swa0Z>

Airport Security

Extensive screening process

Medicinal & toiletry articles

Including hairspray, aerosols, rubbing alcohol, inhalers, nail polish and remover, etc.

Checked

Carry on

Quantity limits: cannot exceed 2 kg (70 ounces) or 2 L (68 fluid ounces). Containers must not exceed 0.5 kg (18 ounces) or 500 ml (17 fluid ounces)

Liquids, gels, and aerosols in carry-on baggage are further limited to 100-ml (3.4 oz) containers at the TSA security checkpoint

Batteries, lithium

Rechargeable and non-rechargeable lithium batteries, cell phone batteries, laptop batteries

<https://youtu.be/8wIxRITgSEQ?si=fCSPI7bhbXNW8mRr>

Passports

After going through security, we will go to the gate to board our flight. Travel chaperones will collect student passports to hold until end of flight.

Students are responsible to keep passports through Beijing airport immigration. Teachers will collect passports once on bus to hotel.

中国边检入境指南

Guide to Arrival Procedures of China Immigration Inspection

<https://youtu.be/sN8FIHBLkA0?si=VXlvBQcry3JYgUO4>

Important to Remember

- Stay with chaperone and group
- Have passport and arrival card
- Use group lane for inspection
- Stay behind yellow line
- No photography
- Remove hat, sunglasses
- Keep your luggage claim check

Stay with your group!

It's smarter to travel in groups

<https://youtu.be/FiIMhPhkoSA?si=zGHQDyaQOggA5oop>

Just in case...

Keep up with your group while visiting sites off campus.

IF you do get lost:

- **Stay exactly where you are**
- Look around for our bus
- Find a place nearby with wifi, get on WeChat -call Mrs. Roe
- Politely ask someone with a phone to call Mrs.Roe

Don't panic!

请问 您能帮助我吗?您可以给我的老师打电话吗?

Qǐngwèn, Nǐn néng bāngzhù wǒ ma?

Nín kěyǐ gěi wǒ de lǎoshī dǎ diànhuà ma?

Excuse me, may I ask, Can you help me?

Can you call my teacher?

Field Excursions - Mini Projects

Wind Turbines - Can they Spin? How High?
by Eryne Jenkins

In Hangzhou, China this past month, the Delaware Summer Chinese LINC program engaged in an immersive experience of culture, language, and STEM in regards to green energy alternatives. Through various site visits and seminars, the group learned about wind energy, solar energy, biomass energy, geothermal energy, and many other viable alternatives. These energies, according to Dr. Zhongqiu Zhou of the Environment and Energy Security Institute, must come from resources which are naturally replenished on a human timescale, in order to be considered renewable. Wind energy seems especially interesting given the availability of wind, and, through a seminar entitled China's Plan and Recent Development in Clean Energy by Dr. Zhou, seems to command a more in depth view of its potential as a source of clean energy.

Wind energy can be explained in just a few steps. First, a rotating generator converts wind energy to electricity as the turbines spin. Secondly, a transformer increases the voltage for transmission to a substation, where it prepares it for a long distance transfer. Finally, the energy is transmitted to the grid. Wind farms, or the large cluster of wind turbines in one area, can be found on open land, on the coastlines, and in mountainous regions. In Delaware, former Governor Jack Markell previously signed a law to even allow homeowners in the state to have wind turbines on their properties. While this is more of an unusual approach to wind energy, this could be a telling example of the future.

Final Project

Delaware
Department of Education

Learning Outcome

Purpose: To demonstrate the impact of this immersion experience on your understanding of the relationship of studying Chinese language and culture and using these skills in the STEM-context of green energy development.

Product: 3-5-minute, multi-media table-top presentation with a partner on one of the following topics:

- ∞ American vs. Chinese Perspectives on a Green Energy Solution
- ∞ Chinese Language Skills as an Advantage for College and Career Options
- ∞ American and Chinese Cultural Differences and Ways to Facilitate Cooperation and Collaboration

Audience: Global; State officials and Delaware business owners in the field of green energy

Carney launches effort to explore offshore wind in Delaware

Scott Goss, The News Journal Published 3:41 p.m. ET Aug. 28, 2017 | Updated 6:22 p.m. ET Aug. 28, 2017

Delaware this week took its first major step toward encouraging the development of an offshore wind farm in nearly a decade.

Gov. John Carney on Monday signed an executive order to create a "working group" that will examine the potential costs and benefits of generating

electricity from such a project.

One of the first questions the 17-member working group will need to answer is how to avoid the missteps that caused the undoing of Delaware's previous attempt to foster an offshore wind project under Carney's predecessor, former Gov. Jack Markell.

"We've been down this road before and were unsuccessful in getting a project off the coast of Sussex County off the ground," Carney said. "But I think conditions have changed significantly."
